Biomateriomics (Springer Series in Materials Science)

Steven W. Cranford, Markus J. Buehler

Biomateriomics (Springer Series in Materials Science) Steven W. Cranford, Markus J. Buehler

Biomateriomics is the holistic study of biological material systems. While such systems are undoubtedly complex, we frequently encounter similar components -- universal building blocks and hierarchical structure motifs -- which result in a diverse set of functionalities. Similar to the way music or language arises from a limited set of music notes and words, we exploit the relationships between form and function in a meaningful way by recognizing the similarities between Beethoven and bone, or Shakespeare and silk. Through the investigation of material properties, examining fundamental links between processes, structures, and properties at multiple scales and their interactions, materiomics explains system functionality from the level of building blocks.

Biomateriomics specifically focuses the analysis of the role of materials in the context of biological processes, the transfer of biological material principles towards biomimetic and bioinspired applications, and the study of interfaces between living and non-living systems. The challenges of biological materials are vast, but the convergence of biology, mathematics and engineering as well as computational and experimental techniques have resulted in the toolset necessary to describe complex material systems, from nano to macro. Applying biomateriomics can unlock Nature's secret to high performance materials such as spider silk, bone, and nacre, and elucidate the progression and diagnosis or the treatment of diseases. Similarly, it contributes to develop a de novo understanding of biological material processes and to the potential of exploiting novel concepts in innovation, material synthesis and design.

From reader reviews:

Jane Moore:

Do you one of people who can't read pleasurable if the sentence chained inside straightway, hold on guys this particular aren't like that. This Biomateriomics (Springer Series in Materials Science) book is readable by you who hate those straight word style. You will find the information here are arrange for enjoyable looking at experience without leaving even decrease the knowledge that want to offer to you. The writer of Biomateriomics (Springer Series in Materials Science) content conveys prospect easily to understand by lots of people. The printed and e-book are not different in the content but it just different as it. So , do you nonetheless thinking Biomateriomics (Springer Series in Materials Science) is not loveable to be your top list reading book?

Effie Peoples:

This book untitled Biomateriomics (Springer Series in Materials Science) to be one of several books that will best seller in this year, here is because when you read this publication you can get a lot of benefit onto it. You will easily to buy this book in the book retailer or you can order it through online. The publisher of the book sells the e-book too. It makes you more readily to read this book, as you can read this book in your Touch screen phone. So there is no reason to your account to past this e-book from your list.

Martha Fincher:

Typically the book Biomateriomics (Springer Series in Materials Science) has a lot details on it. So when you read this book you can get a lot of profit. The book was compiled by the very famous author. Mcdougal makes some research just before write this book. This kind of book very easy to read you can find the point easily after scanning this book.

Kenneth Copeland:

Do you like reading a publication? Confuse to looking for your best book? Or your book seemed to be rare? Why so many problem for the book? But almost any people feel that they enjoy with regard to reading. Some people likes studying, not only science book and also novel and Biomateriomics (Springer Series in Materials Science) as well as others sources were given understanding for you. After you know how the great a book, you feel want to read more and more. Science e-book was created for teacher or even students especially. Those books are helping them to bring their knowledge. In some other case, beside science guide, any other book likes Biomateriomics (Springer Series in Materials Science) to make your spare time much more colorful. Many types of book like this.
