Space-Time Reference Systems (Astronomy and Astrophysics Library)

Michael Soffel, Ralf Langhans

Space-Time Reference Systems (Astronomy and Astrophysics Library) Michael Soffel, Ralf Langhans

The high accuracy of modern astronomical spatial-temporal reference systems has made them considerably complex. This book offers a comprehensive overview of such systems. It begins with a discussion of 'The Problem of Time', including recent developments in the art of clock making (e.g., optical clocks) and various time scales. The authors address the definitions and realization of spatial coordinates by reference to remote celestial objects such as quasars. After an extensive treatment of classical equinox-based coordinates, new paradigms for setting up a celestial reference system are introduced that no longer refer to the translational and rotational motion of the Earth. The role of relativity in the definition and realization of such systems is clarified.

The topics presented in this book are complemented by exercises (with solutions). The authors offer a series of files, written in Maple, a standard computer algebra system, to help readers get a feel for the various models and orders of magnitude.

Beyond astrometry, the main fields of application of high-precision astronomical spatial-temporal reference systems and frames are navigation (GPS, interplanetary spacecraft navigation) and global geodynamics, which provide a high-precision Celestial Reference System and its link to any terrestrial spatial-temporal reference system. Mankind's urgent environmental questions can only be answered in the context of appropriate reference systems in which both aspects, space and time, are realized with a sufficiently high level of accuracy. This book addresses all those interested in high-precision reference systems and the various techniques (GPS, Very Long Baseline Interferometry, Satellite Laser Ranging, Lunar Laser Ranging) necessary for their realization, including the production and dissemination of time signals.

From reader reviews:

Wilma Hines:

Do you have favorite book? In case you have, what is your favorite's book? Reserve is very important thing for us to learn everything in the world. Each e-book has different aim as well as goal; it means that guide has different type. Some people feel enjoy to spend their time for you to read a book. These are reading whatever they take because their hobby is usually reading a book. What about the person who don't like reading through a book? Sometime, individual feel need book once they found difficult problem or even exercise. Well, probably you will require this Space-Time Reference Systems (Astronomy and Astrophysics Library).

Tanisha Goss:

Have you spare time for any day? What do you do when you have a lot more or little spare time? Yeah, you can choose the suitable activity with regard to spend your time. Any person spent their particular spare time to take a go walking, shopping, or went to often the Mall. How about open or even read a book entitled Space-Time Reference Systems (Astronomy and Astrophysics Library)? Maybe it is for being best activity for you. You realize beside you can spend your time using your favorite's book, you can cleverer than before. Do you agree with their opinion or you have various other opinion?

Adam Cohn:

That publication can make you to feel relax. This book Space-Time Reference Systems (Astronomy and Astrophysics Library) was vibrant and of course has pictures on the website. As we know that book Space-Time Reference Systems (Astronomy and Astrophysics Library) has many kinds or genre. Start from kids until teenagers. For example Naruto or Private eye Conan you can read and think you are the character on there. Therefore , not at all of book are usually make you bored, any it can make you feel happy, fun and loosen up. Try to choose the best book in your case and try to like reading that.

Ricardo Hayward:

A lot of e-book has printed but it is different. You can get it by net on social media. You can choose the most beneficial book for you, science, comic, novel, or whatever by means of searching from it. It is known as of book Space-Time Reference Systems (Astronomy and Astrophysics Library). You'll be able to your knowledge by it. Without leaving the printed book, it can add your knowledge and make you actually happier to read. It is most significant that, you must aware about book. It can bring you from one spot to other place.
