Applied Neuropsychology of Attention: Theory, Diagnosis and Rehabilitation

Applied Neuropsychology of Attention: Theory, Diagnosis and Rehabilitation

The concept of attention in academic psychology has been treated with varying degrees of importance over the years. From playing a key role in the 19th century, it was discarded in the first half of the 20th century, as clinical psychologists claimed it was superfluous to the essential subconscious processes of the mind, and experimental psychologists thought it was not a scientific term. *Applied Neuropsychology of Attention* aims to review the considerable developments in the field of attention over the last 20 years as it makes its comeback.

This collection of essays forms a comprehensive overview of this crucial component of human cognitive function. The book begins with an explanation of the essential theoretical concepts and definitions. Aspects of diagnosis are then discussed as the assessment and impairments of attention are reviewed in normal ageing and in specific neurological categories. Victims of brain injury and patients with cerebrovascular or neurodegenerative diseases are considered. A critical analysis of existing practices in cognitive rehabilitation is given and a review of the techniques and methodologies used for treating attentional disturbances brings the book to a conclusion.

Leclercq and Zimmermann have compiled a book of cutting-edge research which provides an effective framework to detect, analyse and understand the nature of attention deficit. The book will be invaluable to clinicians, mental health specialists and all academic psychologists in the field.
