Modelling Public Transport Passenger Flows in the Era of Intelligent Transport Systems: COST Action TU1004 (TransITS) (Springer Tracts on Transportation and Traffic)

This book shows how transit assignment models can be used to describe and predict the patterns of network patronage in public transport systems. It provides a fundamental technical tool that can be employed in the process of designing, implementing and evaluating measures and/or policies to improve the current state of transport systems within given financial, technical and social constraints. The book offers a unique methodological contribution to the field of transit assignment because, moving beyond “traditional” models, it describes more evolved variants that can reproduce:

- intermodal networks with high- and low-frequency services;
- realistic behavioural hypotheses underpinning route choice;
- time dependency in frequency-based models; and
- assumptions about the knowledge that users have of network conditions

that are consistent with the present and future level of information that intelligent transport systems (ITS) can provide. The book also considers the practical perspective of practitioners and public transport operators who need to model and manage transit systems; for example, the role of ITS is explained with regard to their potential in data collection for modelling purposes and validation techniques, as well as with regard to the additional data on network patronage and passengers’ preferences that influences the network-management and control strategies imple

mented. In addition, it explains how the different aspects of network operations can be incorporated in traditional models and identifies the advantages and disadvantages of doing so. Lastly, the book provides practical information on state-of-the-art implementations of the different models and the commercial packages that are currently available for transit modelling. Showcasing original work done under the aegis of the COST Action TU1004 (TransITS), the book provides a broad readership, ranging from Master and PhD students to researchers and from policy makers to practitioners, with a comprehensive tool for understanding transit assignment models.

From reader reviews:

Lamont Williams:

In this 21st century, people become competitive in every single way. By being competitive currently, people have to do something to make these people survive, being in the middle of the particular crowded place and notice by surrounding. One thing that often many people have underestimated it for a while is reading. Yeah, by reading a reserve your ability to survive raise then having chance to endure than other is high. In your case who want to start reading any book, we give you this specific Modelling Public Transport Passenger Flows in the Era of Intelligent Transport Systems: COST Action TU1004 (TransITS) (Springer Tracts on Transportation and Traffic) book as starter and daily reading reserve. Why, because this book is greater than just a book.

Kristi Goins:

The publication with title Modelling Public Transport Passenger Flows in the Era of Intelligent Transport Systems: COST Action TU1004 (TransITS) (Springer Tracts on Transportation and Traffic) contains a lot of information that you can discover it. You can get a lot of advantage after read this book. This specific book exist new know-how the information that exist in this book represented the condition of the world right now. That is important to you to understand how the improvement of the world. This kind of book will bring you in new era of the global growth. You can read the e-book on the smart phone, so you can read that anywhere you want.

Jodi Dunn:

You may spend your free time to see this book this publication. This Modelling Public Transport Passenger Flows in the Era of Intelligent Transport Systems: COST Action TU1004 (TransITS) (Springer Tracts on Transportation and Traffic) is simple to deliver you can read it in the playground, in the beach, train and also soon. If you did not possess much space to bring often the printed book, you can buy the particular e-book. It is make you better to read it. You can save the actual book in your smart phone. Consequently there are a lot of benefits that you will get when one buys this book.

Karin Decker:

As a scholar exactly feel bored for you to reading. If their teacher questioned them to go to the library or to make summary for some book, they are complained. Just minor students that has reading's heart or real their hobby. They just do what the teacher want, like asked to go to the library. They go to right now there but nothing reading significantly. Any students feel that reading is not important, boring and also can't see colorful images on there. Yeah, it is to be complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore, this Modelling Public Transport Passenger Flows in the Era of

Intelligent Transport Systems: COST Action TU1004 (TransITS) (Springer Tracts on Transportation and Traffic) can make you truly feel more interested to read.
